Test whether the filename string *name* matches the pattern string *pat*, returning ‘‘True‘‘ or ‘‘False‘‘; the comparison is case-sensitive and does not apply :func:‘os.path.normcase‘.

Construct a list from those elements of the :term:‘iterable‘ of filename strings *names* that match the pattern string *pat*. It is the same as ‘‘[n for n in names if fnmatch(n, pat)]‘‘, but implemented more efficiently.
